no. 21, Seriya Biologii, no. 4] p. 101-112.

DESCRIPTORS: *Birds, Reproduction (Physiology),
*Behavior, Eggs, Stimulation.

In the course of nest-building and egg-laying the thresh-
olds of two innate reactions -- brooding and feeding --
are lowered simultaneously. By the end of egg-laying
the bird is equally ready to act according to both
reactions. The sequence of these reactions depends on
the sequence in which the stimuli are formed. In most
of the passerines the nest is three times as strong as
